

AG-01 ANTISTATIC GUN

The antistatic gun AG-01, shockless, is a compressed air gun with a ions emitter nozzle. This allows that the air flow becomes ionized when you push the trigger and so able to eliminate the electrostatic charges, which are present on the surfaces where the trigger is directed. With this design the antistatic gun AG-01 is very effective in comparison with guns with internal ionization as well as very maneuverable and ergonomic. The gun AG-01 is supplied with a high voltage cable, which is available in different lengths and which has to be connected to a power supply..

AG-01	
Working distance	20-1500 mm
Working tension	7000 V
Power supply	AF2WR – PS1WR
Pressure	Max. 10 Bar
Ambient temperature	0° C - 70° C
High tension cable length	3/5/10 meters, others lengths on request
