

IONIZING HEAD **IH-4**

The ionizing head IH-4 is a small antistatic bar.

All its electronic components are impregnated in epoxy resin so as to ensure safety and durability. The stainless steel emitters are shockless as they are connected to the high voltage through resistors.

The ionizing head IH-4 is supplied with high voltage cable, which is available in different lengths and cable must be connected to the power source.

IH-4	
Working distance	50-150 mm
Working tension	7000 V
Power supply	AF2WR – PS1WR
Ambient temperature	0° C - 70° C
Protection grade	IP 67
High tension cable length	3/5/10 m, others lengths upon request
