

FIXING HEAD FH4

The **FH4** fixing head has been designed to fix the film edges in the cast extrusion lines, thus preventing the film from shrinking in width while cooling down.

The stainless steel emitters are connected to high voltage by means of resistors, which prevent the creation of sparks and increase the operator's safety.

The **FH4** fixing head shall be connected to the EASY CHARGE or ECG-30 charging generator.

FH4	
Body material	PET
Generator	EASY CHARGE or ECG-30
Emitters	Stainless steel, not replaceable
Operating temperature	0° C - 150° C
